

DiDi CX Quality Analyst — Business Case

May 2026 snapshot · Market = All · Official formulas · 2,460 QA evaluations · 77,266 CSAT surveys · 994,591 contacts

01 EXECUTIVE SUMMARY

May performance is not a uniform quality result. Process quality on the audit form is above goal; customer-perceived resolution is not. QA Score is **94.14** against a goal of 85 (green, +9.14). CSAT is **79.95%** against 85% (red, -5.05). Official Recontact is **5.83%** against 5.44% (amber, +0.39). The CSAT miss is the only KPI more than five points off goal. Recontact is close on the headline because Self Help is 67% of contacts at a 1.22% rate; Phone + Live Chat sit at 15.56%.

The channel split inverts the story a global average cannot tell. Live Chat (85.6% of audits) scores QA 96.01 and fails CSAT at 77.55% with Recontact 15.99%. Phone scores QA 83.04 (amber vs 85) and *meets* CSAT at 86.26%, with Recontact 13.47%. Agents can pass the Live Chat rubric and still leave the customer unsatisfied and coming back. Phone fails checklist attributes the auditor sees (Time management, Complete and correct information) that the customer, on average, does not punish in the survey.

Week-to-week, QA stays green (92.4 → 95.5). CSAT never crosses 85% (range 79.2–81.0). Recontact improves from 6.33% in W18 to 5.26% in W22 and lands under goal in the last week — without a matching CSAT lift (W22 CSAT 79.4%, red). First-contact containment and a 4–5 star experience are not the same mechanism this month.

QA SCORE · GOAL ≥ 85

94.14

GREEN +9.14 vs goal · 2,460 evaluations

CSAT · GOAL $\geq 85\%$

79.95%

RED -5.05 vs goal · 77,266 surveys

RECONTACT · GOAL $\leq 5.44\%$

5.83%

AMBER +0.39 vs goal · 994,591 contacts

QA and CSAT versus the 85 goal

Official May snapshot. QA is +9.14 vs goal; CSAT is -5.05 (red).

Recontact: official mix versus live

Self Help (67% of contacts at 1.22%) holds the official rate near goal. Live channels are 15.56%.

Weekly trend — QA stays green; CSAT never clears 85; Recontact improves

W18 has no QA audits. W22: QA 95.5, CSAT 79.4% (red), Recontact 5.26% (under goal).

Single most critical finding for leadership

The official mix says quality is fine and recontact is almost on goal. The live operation says otherwise. CSAT is 5.05 points below 85% — a 1-star cliff (16.5% of surveys), not a mass of 3-star indifference — and it is concentrated in Live Chat and in three Contact reason Lv4 (detail) families: order status / delay, cancellation charge or debt, and refund status. On those reasons QA is typically green. Coaching the global 94.14, or celebrating FCR derived from 5.83% ($\approx 94.17\%$), will not close the gap. The work is policy, tool, and first-contact truthfulness on status and money — plus a Phone QA recovery plan, which is the only audited channel below 85.

02 QA ANALYSIS — BY CHANNEL

Only Phone and Live Chat are audited. Attribute sets are not mixed. Status vs goal: green = at or above 85; amber = within 5 points; red = more than 5 points below.

CHANNEL	QA SCORE	VS 85	STATUS	EVALUATIONS	SHARE	CRITICAL-FAIL AUDITS
Live Chat	96.01	+11.01	GREEN	2,105	85.6%	2.95%
Phone	83.04	-1.96	AMBER	355	14.4%	13.52%
Overall	94.14	+9.14	GREEN	2,460	100%	4.47% (110 audits scored 0)

Overall QA is a Live Chat-weighted average. Phone's 13.5% fatal rate is more than 4× Live Chat. Do not manage Phone off the 94.14 headline.

Channel inversion — QA versus CSAT

Chat passes the form and fails the customer. Phone is the reverse.

Live recontact versus fatal QA rate

Both channels miss 5.44%. Chat recontacts without fatal QA; Phone fatals at 13.5%.

QA Score distribution — bimodal, not a mass at 94

n = 2,460. 82.7% score 100; 4.5% score 0. The 94.14 mean is not a typical agent.

Phone

Phone is the only audited channel below goal (83.04, amber). Top failing attributes are almost entirely a Phone problem: Time management accounts for 133 fails — 64.3% of Phone fails and –4.15 pp impact on the Phone mean. Complete and correct information is CRITICAL (28 fails, 13.5%, –6.55 pp): fewer events, larger score damage because a critical fail zeros the audit. User name is a distant third (15 fails).

TOP FAILING ATTRIBUTE (PHONE)	FAILS	% OF PHONE FAILS	IMPACT (PP)	CRITICAL
Time management	133	64.3%	–4.15	No
Complete and correct information	28	13.5%	–6.55	Yes
User name	15	7.2%	–0.86	No

Phone — top failing attributes

n = 355. Time management is 64% of Phone fails. Complete and correct information is critical and zeros the audit.

Lowest QA Contact reason Lv4 (detail) on Phone. Order-state mismatches dominate. Hypothesis: the agent is working from a status the customer's GPS / receipt contradicts, then either rushes the call (Time management) or states an incorrect resolution (Complete and correct information — fatal). This is a system-truth problem expressed as a checklist fail, not a greeting problem.

CONTACT REASON LV4 (DETAIL) — PHONE, LOWEST QA	QA	N	STATUS
Order appears as completed but customer haven't receive it - market place	47.5	4	RED
Order is active but customer already received it	65.8	12	RED
Issues while paying to courier	66.7	3	RED

Marketplace completed-not-received (n=4) and courier pay (n=3) are directional only. "Order is active but customer already received it" (n=12) is the first Phone CR with a usable sample under goal.

Live Chat

Live Chat is comfortably above goal (96.01, green) on 2,105 evaluations. Defects are different from Phone. Greeting and identification is 30.9% of Chat fails (96) but only -0.58 pp on the Chat mean — high frequency, low lethality. Service availability is CRITICAL (46 fails, -2.10 pp) and is the Chat attribute that actually moves the score. Service attitude is 69 fails (22.2%). Fatal audits are 2.95% versus 13.52% on Phone.

TOP FAILING ATTRIBUTE (LIVE CHAT)	FAILS	% OF CHAT FAILS	IMPACT (PP)	CRITICAL
Greeting and identification	96	30.9%	-0.58	No
Service attitude	69	22.2%	-0.64	No*
Service availability	46	14.8%	-2.10	Yes

*On the Live Chat form this attribute is not tagged critical in the fail extract; globally the same name includes critical Phone/Chat variants. Manage Chat "Service availability" as the fatal driver.

Live Chat — top failing attributes

n = 2,105. Greeting is frequent, low impact. Service availability is the fatal Chat driver.

Lowest QA Contact reason Lv4 (detail) on Live Chat all have n=5. They are watch items, not a program: verbal aggression 76.0 (red); referral coupon information 80.0 (amber); store registration 80.0 (amber). Hypothesis for verbal aggression: Chat handling of hostile users still fails attitude / availability even when the rest of Chat is clean. Do not staff a workstream on coupon or store-registration QA until n increases.

The Live Chat QA result must not be read as CX success. The same channel is CSAT 77.55% (red, -7.45) and Recontact 15.99% (red). Process compliance and customer outcome have decoupled.

03 QA ANALYSIS — BY CR LV4

Ranked below: Contact reason Lv4 (detail) with n ≥ 10 that sit under the QA goal of 85. These are the underperformers with a sample leadership can act on. A second table lists lower-n reds so they are not lost, but they are not the worklist.

RANK	CONTACT REASON LV4 (DETAIL)	QA	N	VS 85	STATUS	DOMINANT FAIL PATTERN
1	Order is active but customer already received it	65.8	12	-19.2	RED	Complete and correct information (critical, 3) · Time management (2)
2	Order appears as completed but customer haven't receive it - full service	68.2	49	-16.8	RED	Time management (22) · Complete and correct information (critical, 13)
3	Refund status and conditions	76.4	25	-8.6	RED	Time management (11) · Compensations and refunds (critical, 2)
4	Wrong order	81.0	20	-4.0	AMBER	Time management (10) · Compensations and refunds (critical, 3)

Underperforming Contact reason Lv4 (detail) — QA, n ≥ 10

Dashed line = goal 85. Highest-volume CRs (Incomplete / Inedible order) are green and omitted.

Root-cause hypothesis (attribute-based, not proven causality). The four underperforming CRs share a Phone-like fail signature: handle-time pressure plus fatal information / compensation errors. Agents appear to close status and refund contacts without a verified order-state or a policy-correct compensation path. That is consistent with a broken source-of-truth (order status in the tool vs what the customer sees) and with refund policy that takes longer than the AHT the form rewards. Highest-volume QA CRs — Incomplete order (96.3, n=161), Inedible order (97.5, n=155) — are green; the miss is not “food complaints in general.”

Source naming is not normalized. A separate string “order appears as completed but customer haven't receive it - full service” (lowercase) scores 96.6 on n=89. “order is active but customer already received it” (lowercase) scores 96.4 on n=42 versus 65.8 on n=12 for the capitalized label. Do not blend those rows. Treat them as distinct labels until QA taxonomy is cleaned.

WATCHLIST (N < 10) — DO NOT STAFF AS A PROGRAM	QA	N	STATUS
Order appears as completed but customer haven't receive it - market place	47.5	4	RED
verbal aggression	76.0	5	RED
referral coupon information	80.0	5	AMBER
store registration	80.0	5	AMBER

04 CSAT / VOC ANALYSIS

Official CSAT is (4★ + 5★) / Feedback CNT = **79.95%** (red, -5.05 vs 85%). Closing the gap requires ~3,900 additional 4-5★ surveys. The mix is polarized: 75.7% five-star, 16.5% one-star (12,753). Eighty-two percent of unsatisfied surveys are 1★, not 2★/3★. This is rejection of the outcome, not mild disappointment.

STAR MIX	SURVEYS	SHARE	ROLE IN OFFICIAL CSAT
5 Stars	58,486	75.7%	Counts as satisfied
4 Stars	3,292	4.3%	Counts as satisfied
3 Stars	1,793	2.3%	Unsatisfied
2 Stars	942	1.2%	Unsatisfied
1 Star	12,753	16.5%	Unsatisfied — the cliff

Star mix — a 1-star cliff, not 3-star drift

Official CSAT = (4-star + 5-star) / 77,266. 12,753 surveys are 1-star.

CSAT by Business Type versus 85%

Food 46,071 surveys; Full Service 27,113. Other (n=558) is a taxonomy dump. Pickup n=35 is not a program.

Most impactful dimensions

DIMENSION	SEGMENT	CSAT	VS 85%	STATUS	SURVEYS
Channel	Live Chat	77.55%	-7.45	RED	55,962
Channel	Phone	86.26%	+1.26	GREEN	21,304
Business Type	Food	80.74%	-4.26	AMBER	46,071
Business Type	Full Service	79.67%	-5.33	RED	27,113
Business Type	Market Place	80.34%	-4.66	AMBER	3,489
Business Type	Other	26.52%	-58.48	RED	558
Business Type	Pickup	74.29%	-10.71	RED	35

User Type in this snapshot is Customer only (100% of surveys). QA LOB is Delivery only (2,460/2,460). Business Type is the actionable LOB cut. Pickup n=35 is not a program. Other (26.52%, n=558) is a taxonomy dump — investigate labeling before treating it as a product line.

Detractors (volume of unsatisfied surveys). Three Contact reason Lv4 (detail) names produce the CSAT miss. Two high-volume food reasons (incomplete / inedible / don't want the order) actually sit at or above 85% and are not the problem.

CONTACT REASON LV4 (DETAIL)	CSAT	UNSATISFIED	SURVEYS	READ
user request order status or delay information	67.8%	3,189	9,918	Largest unsatisfied volume
User disagrees with cancellation charge/debt	67.4%	1,951	5,992	Policy / charge dispute
order status & delays	64.7%	1,800	5,096	Worst CSAT of the volume set
refund status and conditions	67.0%	1,181	3,582	Money not landed
user don't want the order anymore	88.3%	1,229	10,518	High volume, not a CSAT miss
incomplete order	89.4%	874	8,227	High volume, not a CSAT miss

Unsatisfied surveys by Contact reason Lv4 (detail)

Red = CSAT miss (~67%). Grey = CSAT 88-89% — high volume, not the miss.

VOC — what unsatisfied customers write

8,223 real comments; 4,655 negative. Themes below are from tagged low-score comments (2,749 tagged of a 4,000-comment low-score sample).

VOC THEME	MENTIONS	% OF TAGGED	IMPLICATION
Refund / compensation not received	754	27.4%	Outcome, not script
No solution provided	664	24.2%	Contact did not close the issue
Driver behavior	435	15.8%	Marketplace inheritance; CX cannot fully own
Order / trip issues	292	10.6%	Ops / logistics
Long wait time	237	8.6%	Delay / ETA
Poor service	196	7.1%	Generic service complaint

VOC themes in negative comments

2,749 tagged low-score comments. Customers talk about refund, no solution, and driver — outcome, not greeting.

CSAT vs QA. There is no positive channel-level correlation this month. Phone: QA amber, CSAT green. Live Chat: QA green, CSAT red. Combined CR analysis (section 06) repeats the pattern at reason level: QA 91–98 on the same names where CSAT is 64–67. The audit form is not a leading indicator of CSAT in May. Using QA 94.14 as evidence that “experience is healthy” would be a misread.

05 RECONTACT ANALYSIS

Official Recontact = Σ Recontact Volume / Σ Contacts across all 12 channels = **5.83%** (amber, +0.39 vs 5.44%). Rates are never averaged across rows. FCR is derived as 100 – official Recontact ($\approx$ 94.17%) and has no business-case target.

SCOPE	RATE	VS 5.44%	STATUS	CONTACTS
All 12 channels (official)	5.83%	+0.39	AMBER	994,591
Excluding Self Help	15.19%	+9.75	RED	327,941
Phone + Live Chat only	15.56%	+10.12	RED	293,300

Official 5.83% is Self Help dilution — live rate is 15.56%

Ratio of sums across 994,591 contacts. Rates are never averaged across rows.

Self Help: 666,650 contacts (67.0%), rate 1.22% (green vs 5.44%). Live Chat: 243,626 contacts, 38,961 recontacts, 15.99% (red). Phone: 49,674 contacts, 13.47% (red). GPTBot 13.73% on 19,508 contacts is a secondary live-adjacent leak.

CONTACT REASON LV4 (DETAIL) — RECONTACT VOLUME	RECONTACTS	SHARE	RATE	CONTACTS
user request order status or delay information	13,014	22.4%	16.92%	76,911
order status & delays	7,680	13.2%	19.34%	39,706
User disagrees with cancellation charge/debt	6,599	11.4%	12.96%	50,902
user don't want the order anymore	6,216	10.7%	2.20%	282,543
incomplete order	4,110	7.1%	3.19%	128,724
refund status and conditions	2,901	5.0%	15.69%	18,484
cannot place cash order (under antifraud review)	1,776	3.1%	24.40%	7,278

Relationship to QA and CSAT. Volume leaders for recontact are the same status / charge / refund names that lead unsatisfied CSAT. Where QA sample exists on those names, QA is green (see section 06). High recontact is therefore not explained by agents failing the form. “user don't want the order anymore” generates the fourth-largest recontact count because it is a huge contact pool (282,543), but its rate is 2.20% (green) and CSAT is 88.3% — do not put it on the recovery plan. Antifraud cash-order (24.40%) is a high-rate, moderate-volume exception that is a product/risk loop, not a greeting issue.

06 COMBINED ANALYSIS

The single operational story: **status, money, and Chat**. Customers contact about where the order is, a cancellation charge they reject, or a refund that has not landed. On those Contact reason Lv4 (detail) names, auditors score the interaction as compliant; customers rate 1★ and come back. Live Chat is where that story has volume. Phone is the inverse subplot (QA weak, CSAT strong) and is the correct place for checklist coaching.

CONTACT REASON LV4 (DETAIL)	QA	CSAT	RECONTACT	PATTERN
order status & delays	97.3 (n=45)	64.7% (5,096)	19.34% (7,680 rec)	Low CSAT + High Recontact
User disagrees with cancellation charge/debt	91.4 (n=59)	67.4% (5,992)	12.96% (6,599 rec)	Low CSAT + High Recontact
refund status and conditions	98.4 (n=45)*	67.0% (3,582)	15.69% (2,901 rec)	Low CSAT + High Recontact
Courier overcharged me	92.0 (n=90)	74.6% (962)	8.87% (411 rec)	Low CSAT + High Recontact
cannot place cash order (under antifraud review)	93.6 (n=55)	—	24.40% (1,776 rec)	High Recontact

Combined pattern: QA above goal, CSAT and Recontact below

Distance to goal in percentage points. Same contact reasons pass the audit and fail the customer. Observable pattern, not proven causality.

*A differently capitalized "Refund status and conditions" scores QA 76.4 on n=25 (section 03). Combined merge is case-sensitive. Both labels need a taxonomy fix; the CSAT/Recontact miss on refund is unambiguous either way.

Quantified finding. Status + delay reasons alone: $3,189 + 1,800 = 4,989$ unsatisfied surveys and $13,014 + 7,680 = 20,694$ recontacts. Cancellation charge: 1,951 unsatisfied and 6,599 recontacts. Refund: 1,181 unsatisfied and 2,901 recontacts. Together they are the CSAT and live-recontact program. QA on the matched combined rows is 91–98.

Root-cause hypothesis. Observable pattern only, not confirmed causality. (1) Order-status truth in the agent desktop does not match what the customer sees, so a "correct" contact still leaves the customer without a usable ETA or a corrected ticket — they recontact. (2) Cancellation-charge and refund outcomes are policy/product constraints the agent can explain inside the rubric and still cannot change; VOC "Refund / compensation not received" and "No solution provided" are the customer language for that. (3) Live Chat volume is where that constraint hits CSAT. (4) Phone QA fails are a separate, real skill/process issue (Time management + critical information) that is not the CSAT driver this month.

07 ACTION PLANS — BY LOB / BUSINESS TYPE

QA LOB in the source is a single value (Delivery, n=2,460). Plans are therefore cut on **Business Type** from CSAT — the only LOB-like dimension with material volume — plus two cross-cutting owners for Phone QA and official Recontact reporting. Dates assume a 19 Aug 2026 briefing.

LOB / BUSINESS TYPE	WHAT CHANGES	WHO	BY WHEN
Food CSAT 80.74% · amber · 46,071 surveys Top unsat: order status / delay (2,091 + 1,066), refund (870)	Stand up a Food status-truth playbook: agent desktop vs customer ETA, one-contact update, no “check again later” close. Pair with refund-status SLA visible to the agent (promised date + actual payout). Do not launch Food-wide greeting training.	Food CX Operations Lead, with Product (order status) and Payments (refund SLA)	Playbook live 2 Sep 2026 Refund SLA in tool 18 Sep 2026
Full Service CSAT 79.67% · red · 27,113 surveys Top unsat: cancellation charge/debt (1,104, CSAT 61.0%), then status	Review cancellation-charge exception path: when the agent can waive, when they cannot, and the exact customer language that is allowed. Measure CSAT and recontact on this CR weekly. Status/delay is second; reuse the Food status playbook, do not duplicate.	Full Service CX Operations Lead, with Policy / Pricing	Exception matrix 2 Sep 2026 First weekly CR readout 26 Aug 2026
Market Place CSAT 80.34% · amber · 3,489 surveys Top unsat: status / delay; “order active but already received”	Keep on the status-truth program (same as Food). Add a courier-status mismatch card (active vs delivered). Phone QA on marketplace completed-not-received is n=4 — watch only. Driver-behavior VOC is a partner issue: route to Driver Ops, do not score as agent skill.	Market Place CX Lead + Driver Ops	Mismatch card 18 Sep 2026 VOC routing live 2 Sep 2026
Other CSAT 26.52% · red · 558 surveys · CR = “Other”	This is a labeling failure, not a 26% product. Force CR recoding out of “Other” before any quality intervention. Recode ≥80% of May “Other” sample and republish CSAT without that bucket.	QA taxonomy owner + WFM / QM	Recode complete 2 Sep 2026
Pickup CSAT 74.29% · red · 35 surveys	No action plan. Sample is too small. Revisit only if monthly surveys exceed 200.	—	—
Phone (channel — all LOBs) QA 83.04 · amber · 355 evals · 13.5% fatal	Coaching on Time management and Complete and correct information, concentrated on order-state CRs and Supervisor groups already below 85 (12, 22, 23, 24). Expand Phone audit share; 355 is 14% of QA and cannot hide behind Chat. Report Phone QA separately every week.	QA Lead (Phone) + named supervisors	Coaching started 26 Aug 2026 Phone QA ≥85 by W38 (18 Sep 2026)

LOB / BUSINESS TYPE	WHAT CHANGES	WHO	BY WHEN
Live Chat (channel — all LOBs) QA 96.01 green · CSAT 77.55 red · RC 15.99% red	Stop using Chat QA as the CX health metric. Redirect Chat calibration from Greeting to Service availability (fatal) and to status/charge/refund macros that state what cannot be solved in-contact. Agent 212 / Supervisor 11 (CSAT 27.1, 411 unsatisfied / 564 surveys) is a named case review, not a 223-agent CSAT blitz.	Live Chat Operations Manager + Supervisor 11	Macro rewrite 2 Sep 2026 Agent 212 case review 26 Aug 2026
Official Recontact reporting (all LOBs) 5.83% amber vs 15.56% live	Every leadership pack shows three Recontact numbers: official 12-channel, ex-Self Help, Phone+Chat. Do not present derived FCR 94% as proof of live resolution. GPTBot (13.73%, 2,679 rec) is the next digital leak after Chat.	CX Analytics / Quality Analyst	Effective next weekly pack (26 Aug 2026)

What this brief is not asking leadership to do

Mass CSAT coaching of 223 agents below 85. Greeting campaigns on Live Chat. Using overall QA 94.14 or official FCR ≈94% as evidence that the customer is being resolved. Merging CR strings that differ only by capitalization. Staffing Pickup or n=3–5 QA CRs as programs.

Sources: Business Case May 2026, official KPI formulas (QA = mean of audit scores with critical fail → 0; CSAT = ratio of sums of 4★+5★ over Feedback CNT; Recontact = ratio of sums). Status rules: green = at or above goal; amber = within 5 percentage points; red = more than 5 points off. Lower-is-better for Recontact. Prepared for VP-level use; CONFIDENTIAL.
