

Deliverable 2 — Weekly Performance Report

May 2026 · Market All · Official control totals

Period W19–W22 (4–29 May 2026)

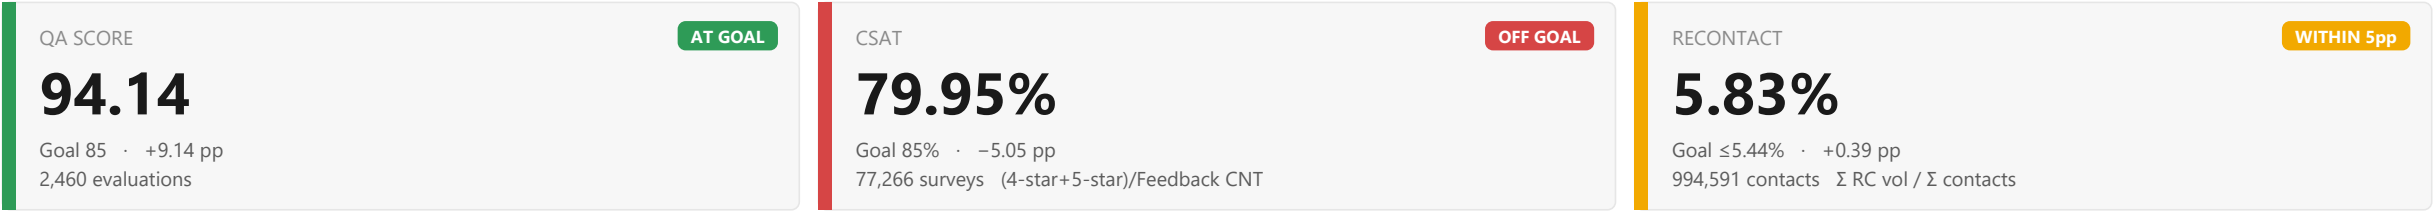

QA = mean audit score CSAT = (4-star + 5-star) / Feedback CNT

Recontact = Σ Recontact Volume / Σ Contacts (ratio of sums, 12-channel mix)

Snapshot 2,460 QA evaluations · 77,266 surveys · 994,591 contacts

Briefing date 20 August 2026

01 Executive Summary

MOST CRITICAL FINDING

CSAT is the miss to manage: 79.95% vs 85% (RED, -5.05 pp) on 77,266 surveys. Live Chat is 72% of feedback at 77.55% CSAT (RED) while Phone is 86.26% (GREEN). Official recontact 5.83% is only AMBER because Self Help is 67% of contacts at 1.22% — excluding it the rate is 15.19%, and Phone+Chat is 15.56%. Dissatisfaction concentrates in order status/delay, cancellation charge/debt, and refund.

GREEN at / above goal AMBER within 5 pp RED more than 5 pp off

Recontact is lower-is-better. FCR = 100 – recontact; no FCR target.

INSIGHTS

- Global QA 94.14 (GREEN, +9.14 vs 85) is not the operating picture. Phone is 83.04 (AMBER) on 355 evaluations; Live Chat 96.01 (GREEN) on 2,105.
- Do not celebrate derived FCR of 94.17% (100 – recontact). There is no FCR target, and the official mix is diluted by Self Help.
- QA sample is Delivery LOB only. Action plans run by Business Type (Food, Full Service, Market Place). Pickup n=35 is excluded.
- Priority: Chat outcome on status/money CRs + Phone coaching. Raising audit score will not close the CSAT gap.

02 QA by Channel — Phone vs Live Chat

Channel	QA	n evals	vs 85	CSAT	n surveys	Status
Phone	83.04	355	−1.96	86.26%	21,304	AMBER
Live Chat	96.01	2,105	+11.01	77.55%	55,962	GREEN
Global	94.14	2,460	+9.14	79.95%	77,266	GREEN

Top failing attributes (fail rate = unique audits / channel n)

Channel	Attribute	Fail rate	Share of fails	Critical
Phone	Time management	37.5%	64.3%	No
Phone	Complete and correct information	7.9%	13.5%	Yes
Phone	User name	4.2%	7.2%	No
Live Chat	Greeting and identification	4.6%	30.9%	No
Live Chat	Service attitude	3.3%	22.2%	No
Live Chat	Service availability	2.2%	14.8%	Yes

Lowest CRs on Phone (n≥10) — Chat CRs with n≥10 are all ≥85

CR Lv4	QA	n	Status
Order is active but customer already rece...	65.83	12	RED
Order appears as completed but customer h...	68.16	49	RED
Refund status and conditions	76.40	25	RED
User disagrees with cancellation charge/d...	80.00	19	AMBER

INSIGHTS

- Phone fail pattern is operational: Time management 37.5% of audits, then Complete and correct information (critical, 7.9%) which zeros the score, then User name 4.2%.
- Chat fail pattern is protocol: Greeting 4.6%, Service attitude 3.3%, Service availability (critical, 2.2%). Score stays high because most fails are non-critical.
- Hypothesis: Phone AHT pressure trades completeness for speed. Chat agents pass the script while customers wait on order/money outcomes the agent cannot close.
- Do not average the two channels. Report Phone and Live Chat separately every week.

03 QA by CR Lv4 — ranked underperformers (n ≥ 10)

CR Lv4 (detail)	QA	n evals	vs 85	Status
Order is active but customer already received it	65.83	12	−19.17	RED
Order appears as completed but customer haven't...	68.16	49	−16.84	RED
Refund status and conditions	76.40	25	−8.60	RED
Wrong order	81.00	20	−4.00	AMBER
User don't want the order anymore	87.37	19	+2.37	GREEN
delivery verification code	88.15	27	+3.15	GREEN
Damaged order	89.00	50	+4.00	GREEN
didi pay balance & top up	89.68	63	+4.68	GREEN
Cancel the order	90.00	49	+5.00	GREEN
cannot use my coupon (under antifraud review)	90.00	12	+5.00	GREEN

4 contact reasons with n≥10 sit below the QA goal of 85. n = evaluation count (not weighted gap × n). Pickup/CSAT LOBs are not on this QA sample.

How to read this ranking

Rows are sorted by QA score ascending among CR Lv4 names with at least 10 evaluations. Phone accounts for the red and amber rows. Live Chat volume (2,105 of 2,460) holds the global average at 94.14. A GREEN CR can still fail CSAT — see Combined (06).

INSIGHTS

- Every QA underperformer with n≥10 is Phone-heavy (delivery not received, already received, refund). Live Chat CRs with n≥8 all sit at or above 85.
- Coaching queue: order completed not received — FS (68.16, n=49) and order active but already received (65.83, n=12).
- Refund status at 76.40 (n=25) is the money-path QA miss — same family as the CSAT/recontact cluster, but here QA actually fails.
- N is the evaluation count. Do not read a weighted gap (gap × n) as audits.

04 CSAT / VOC — inversion vs QA

By Business Type · CSAT = (4-star + 5-star) / Feedback CNT

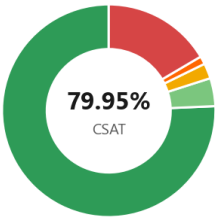

Business Type	CSAT	Surveys	vs 85	Status
Food	80.74%	46,071	-4.26	AMBER
Full Service	79.67%	27,113	-5.33	RED
Market Place	80.34%	3,489	-4.66	AMBER
Other	26.52%	558	-58.48	RED

Largest unsatisfied volume by CR Lv4

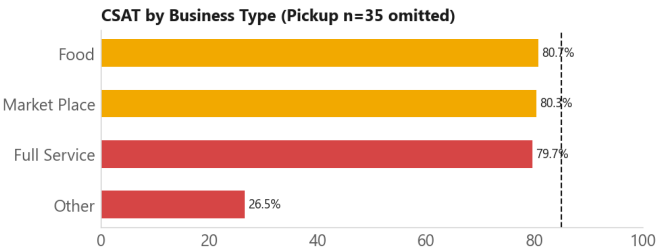

CR Lv4	CSAT	Unsat.	Surveys	Status
user request order status or delay info...	67.8%	3,189	9,918	RED
User disagrees with cancellation charge...	67.4%	1,951	5,992	RED
order status & delays	64.7%	1,800	5,096	RED
user don't want the order anymore	88.3%	1,229	10,518	GREEN
refund status and conditions	67.0%	1,181	3,582	RED
incomplete order	89.4%	874	8,227	GREEN

INSIGHTS

- Star mix: 75.7% five-star but 16.5% one-star. The 1-star block is large enough to keep CSAT RED.
- Food 80.74% (AMBER, 46,071) and Full Service 79.67% (RED, 27,113) carry the miss. Market Place 80.34% AMBER. Other 26.52% on 558 surveys is a catch-all CR, not a LOB program.
- Unsatisfied volume concentrates in order status, cancellation charge/debt, and refund — not in damaged/wrong order, where CSAT is already GREEN.
- VOC on 1-3 star comments: refund/compensation not received and no solution provided dominate tagged mentions. Outcome, not greeting.

5 Stars 75.7% 4 Stars 4.3% 3 Stars 2.3% 2 Stars 1.2% 1 Star 16.5%

05 Recontact — official mix vs live channels

Scope	Rate	Contacts	vs 5.44%	Status
All 12 channels (official)	5.83%	994,591	+0.39	AMBER
Excluding Self Help	15.19%	327,941	+9.75	RED
Phone + Live Chat only	15.56%	293,300	+10.12	RED

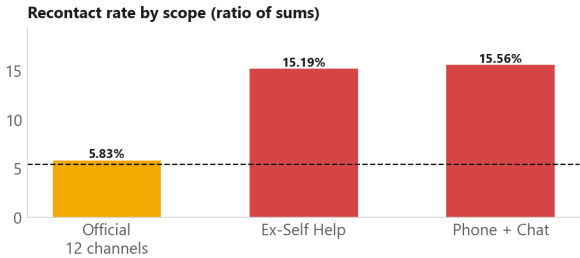

Self Help = 67% of contacts at 1.22% recontact. That weight is why 5.83% can sit next to a 15% live-agent rate.

Top CR Lv4 by recontact volume

CR Lv4	Recontacts	Contacts	Share	Rate	Status
user request order status or delay ...	13,014	76,911	22.4%	16.92%	RED
order status & delays	7,680	39,706	13.2%	19.34%	RED
User disagrees with cancellation ch...	6,599	50,902	11.4%	12.96%	RED
user don't want the order anymore	6,216	282,543	10.7%	2.20%	GREEN
incomplete order	4,110	128,724	7.1%	3.19%	GREEN
cancel the order	3,786	136,897	6.5%	2.77%	GREEN
inedible order	2,985	57,682	5.1%	5.17%	GREEN

INSIGHTS

- Official 5.83% (AMBER, +0.39 pp) is the 12-channel ratio of sums. It is not the live-agent rate.
- Excluding Self Help: 15.19% on 327,941 contacts (RED). Phone+Chat: 15.56% on 293,300 (RED).
- Volume leaders: user request order status (22.4% of recontacts, rate 16.92%), order status & delays (19.34%), cancellation charge (12.96%).
- “User don't want the order anymore” is 10.7% of recontact volume at only 2.20% rate — volume without a rate problem. Do not treat it like status/money.

06 Combined operational story — 2+ KPI fail CRs

CR Lv4	QA (n)	CSAT	Recontact	Pattern
order status & delays	97.3 (45)	64.7%	19.34%	High QA + Low CSAT + High RC
User disagrees with cancellation charge...	91.4 (59)	67.4%	12.96%	High QA + Low CSAT + High RC
refund status and conditions	90.6 (70)	67.0%	15.69%	High QA + Low CSAT + High RC
user request order status or delay info...	95.6 (25)	67.8%	16.92%	High QA + Low CSAT + High RC
Courier overcharged me	92.0 (90)	74.6%	8.87%	Low CSAT + High Recontact
order is active but customer already re...	96.4 (42)	71.2%	6.50%	Low CSAT + High Recontact
placing an order information	96.5 (46)	50.7%	13.78%	Low CSAT + High Recontact

PROCESS vs OUTCOME

On the four status/money CRs, QA is GREEN (91–98) while CSAT is 64–68% and recontact is 13–19%. The audit confirms the script; the customer still comes back. That is not a coaching miss on greeting. It is a resolution-path miss (tracking, compensation, cancellation policy). Official recontact 5.83% understates live-channel repeat work because Self Help dilutes the denominator. Manage the cluster, not the global average.

INSIGHTS

- The status/money cluster shows HIGH QA + LOW CSAT + HIGH recontact. Agents pass the audit; the customer does not get a closed outcome.
- This is process (script) versus outcome (resolution). Greeting/attitude coaching will not move CSAT on these CRs.
- Fix tracking visibility, compensation/refund path, and first-contact close. Measure CSAT and recontact on these four CRs weekly.
- Derived FCR 94.17% is 100 – official recontact. Do not put it on the exec scorecard.

Pickup n=35 surveys omitted. Dates are relative to the 20 August 2026 briefing. QA LOB = Delivery only.

INSIGHTS

- Sequence: (1) war room on status/money CRs from 20 Aug, (2) Phone attribute coaching by 3 Sep, (3) reclassify Other tickets.
- 30-day success: Chat CSAT on status/money CRs moving toward 85%; Phone QA ≥85; Phone+Chat recontact published next to official 5.83%.
- QA staying at 94 is not a 30-day objective — it is already GREEN. Do not trade Chat CSAT work for more script audits.
- Pickup (n=35 surveys) is out of scope. QA LOB is Delivery only.

08 Definitions, status rules, and source notes

Official formulas (do not substitute)

QA Score = simple mean of Score_Pct on 2,460 Delivery evaluations. CSAT % = (4-star + 5-star) / Feedback CNT on 77,266 surveys. Recontact % = Σ Recontact Volume / Σ Contacts on 994,591 contacts (12 channels). Never average row-level rates. FCR is derived as 100 – recontact; there is no FCR target.

Traffic-light rule

GREEN = at or better than goal. AMBER = within 5 percentage points. RED = more than 5 pp off. Recontact is lower-is-better, so 5.83% vs 5.44% is AMBER (+0.39). Phone recontact 13.47% is RED.

What this sample is

QA audits are Delivery LOB only (May 2026, W19–W22, 4–29 May). CSAT Business Type is Food / Full Service / Market Place / Other / Pickup. Pickup (n=35) is out of action-plan scope. Control totals match the Business Case snapshot.

Self Help dilution

Self Help is 67% of contacts at 1.22% recontact. Ex-Self Help 15.19% and Phone+Chat 15.56% are diagnostic, not replacements for the official KPI.

Weighted gaps

N on QA tables is the evaluation count. Do not label $\Sigma(\text{gap} \times n)$ as audits. CR Lv4 names can appear with case variants in source; cluster rows on slide 06 are matched case-insensitively.
